## Maximize Global Web Performance and Watch Your Business Grow

Whether you are in the Fortune 500 or the next big startup, Apica's best-in-class load testing and monitoring platforms help ensure your web-based applications are up and running at peak performance and availability – anytime, from any device.

### Apica WebPerformance

In order to maintain a competitive advantage as applications become richer, more real time, and reliant upon third party services, it is necessary to continuously monitor and improve end-user experience. Apica's synthetic monitoring network is built on an industry-leading infrastructure of 200+ testing locations in over 75 countries, offering unmatched visibility into your mission critical websites and applications. Apica gives your team the tools necessary to ensure the highest availability and world-class performance over time. Uphold your SLA by proactively monitoring your most important digital assets.

### Apica LoadTest

Validate web performance, minimize risk when launching web, mobile, and cloud-based applications, and effectively plan for peak traffic spikes using the most powerful testing platform and expertise available. Apica offers an easy-to-use, flexible Enterprise solution for identifying maximum capacity limits and troubleshooting performance concerns. Apica has performed some of the largest load tests ever conducted and can efficiently generate load to your breaking point, guaranteed.

#### Unparalleled Global Reach

200+ monitoring locations and 50+ testing locations in over 75 countries

#### Fixed-Price Service Plans

We don't believe in nickeling-and-diming our customers

#### Powerful Testing Platform

Test 30+ Gbps bandwidth and 2 million+ concurrent virtual users

#### Seamless Integrations and Open API
